Phishing Email Analysis Report

Task: Analyze a Phishing Email Sample

URL Analyzed: https://tacuartoes-accesssecurity.com

Source: PhishTank - Recent Submissions

Tools Used:

- Web Browser for preview

- Manual analysis

- Screenshot tool

Phishing Indicators:

1. Suspicious Domain Name: The domain looks random and unofficial.

2. Fake Login Page: Tries to mimic a bank login but has no valid SSL certificate.

3. Urgent Language: Phrases like "Your account will be locked!"

4. Grammar Errors: Found misspellings and awkward sentences.

5. Request for Credentials: Page asks for sensitive login details.

Conclusion:

This phishing page is designed to trick users into entering their login credentials. It uses social engineering tactics like urgency and fear. The analysis helped me understand phishing indicators in real-world examples.
